Resources for Teaching Middle School Science

National Academies Press With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area--Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type--core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed--and the only guide of its kind--Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Harry Potter and the Sorcerer's Stone (Novel Study) Gr. 4-8

Rainbow Horizons Publishing Harry Potter and the Sorcerer's Stone is about a young boy who travels to a school for wizards and learns of a magical world far away from his mundane life. Our unit provides teachers with a highly structured format for teaching language arts as students develop a love for reading longer materials like novels. Various areas such as reading comprehension, vocabulary development, spelling, grammar, and writing are all entwined in this integrated approach, eliminating the need for teaching these skills separately. This Novel Study provides a teacher and student section with a variety of activities, chapter questions, word search and answer key to create a well-rounded lesson plan.

Sociology

Wadsworth Publishing Company This comprehensive, mainstream text presents the basic theoretical, conceptual, and methodological tenets of sociology in a readable and personal manner. Its balanced presentation challenges students to pose their own questions about society and to think critically about the world in which they live. It presents the study of sociology as a means by which students can transcend personal and societal prejudices. This Seventh Edition continues its tradition of integrating innovative pedagogy directly into the book, such as: a built-in student study guide; lecture launching CNN video segments that link to text-specific topics; and continued use of the SQ3R (survey, question, read, recite and review) learning technique.
