## Emergency Psychiatry

### Concepts, Methods, and Practices

[Springer Science & Business Media](#) This eagerly awaited volume occupies an important place in the series **Critical Issues in Psychiatry**. Most mental health professionals are quite at home with ordinary day-to-day crises of clinical practice but relatively unprepared for the true psychiatric emergency. Such emergencies are too infrequent for most of us to experience a real sense of competence. On the other hand, emergency room psychiatrists as well as residents and other trainees have long wished for a truly comprehensive textbook that would cover the spectrum of emergency psychiatry. This book is just such a definitive and comprehensive volume for the specialist, while at the same time a clear, succinct, and comprehensive reference for the clinician. The authors consistently present a systematic model emphasizing the interconnection between the process of emergency intervention and the specific features of clinical crisis. They are true to the principle that one's system of care should be built on priorities. It is immediately apparent that these are highly experienced clinicians as well as teachers. It is difficult to imagine a clinical situation that is not addressed by this book. It includes chapters on triage, assessment, and treatment planning; emergencies associated with all the various psychopathologies; age groups from childhood to old age; the emergency management of violent and suicidal patients as well as rape and disaster victims; emergencies secondary to substance abuse and prescribed medications; psychotherapeutic and psychopharmacologic intervention; as well as the relevant legal, social, and community issues in emergency care.

## A Japanese Jungian Perspective on Mental Health and Culture

### Wandering madness

[Taylor & Francis](#) **A Japanese Jungian Perspective on Mental Health and Culture: Wandering Madness** explores differences between Western and Japanese models of mental health. It argues that while the advent of modern mental health has brought about seminal changes in our understanding of and relationship to those who face its challenges, the cure also seems to be something of the cause, as the classification of mental disorders continues to expand and increasing

numbers of people show up to fill them. In this book, psychiatrist and Jungian analyst Iwao Akita presents a new theory of psychoeology in order to highlight what has been lost in our rush to medicalize the psyche, as well as offer a remedy for restoring balance. Drawing upon examples from both Japanese and Western cultures, Dr. Akita discusses an alternative perspective to the polarized viewpoint towards which the West tends. He distinguishes the concept of madness from psychopathology and outlines its dynamics through numerous clinical and cultural examples. He describes the underlying dynamics of substance use and personality disorders, makes important links between these conditions, and clarifies how they can develop into madness. With references to familiar stories and myths from Western and Japanese cultures, this book makes an important contribution to our understanding of mental illness and health, while also making us more aware of how these issues are common to the human experience. This book will be of key interest to academics, researchers, and postgraduate students in the fields of psychoanalysis, Jungian and Post-Jungian studies, and mental health studies. It will also appeal to psychiatrists and other mental health professionals, as well as those with a particular interest in substance use, personality disorders, madness, and cross-cultural comparisons of mental health models.

## Multiple Choice Questions in Psychiatry

CRC Press **MCQs** are still widely used to assess medical students' knowledge. They are also very useful for self-assessment, allowing rapid movement through wide areas of knowledge. All answers are followed by clear explanations that emphasise the importance of turning theory into practice. There are no trick questions here; this is a book about the practice of psychiatry rather than exam technique. Conceived as a companion to 'The Textbook of Psychiatry' by Rees, Lipsedge and Ball, 'MCQs in Psychiatry' also stands alone as a comprehensive self-assessment tool, and goes beyond the scope of the Textbook in covering important aspects of clinical practice.

## The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition

American Psychiatric Pub Since the publication of the Institute of Medicine (IOM) report **Clinical Practice Guidelines We Can Trust** in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has

adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
