Cases on Formal and Informal E-Learning Environments: Opportunities and Practices

Opportunities and Practices

IGI Global Today, the online sphere is no longer just an information repository or a place to search for resources. It has become instead a place supporting both intentional and non-intentional learning. Intentional, formal learning, often leads to certification, whereas informal learning is unstructured and takes place as part of daily work-related or leisure activities. *Cases on Formal and Informal E-Learning Environments: Opportunities and Practices* brings together cases outlining the practical aspect of formal, non-formal, and informal online learning. This book introduces conceptual aspects of these types of learning, knowledge-base, new learning paradigms, policy implications, evaluation and concerns, design, and development of online learning.

Write Choices

SAGE This book helps writers cultivate their nonfiction storytelling skills by exploring the hard choices writers confront when crafting any kind of factual narrative. Rather than isolating various forms of narrative nonfiction into categories or genres, Sue Hertz focuses on examining the common challenges that are unique to the nonfiction writing process. Integrating not only her own insights and experience as a journalist, nonfiction book author, and writing instructor, but also those of other established writers and editors representing all nonfiction styles of writing, Hertz aims to guide writers through key decisions in order to tell the best story possible. Blending how-to instruction with illuminating examples and writers' commentaries drawn from original interviews, *Write Choices* is a valuable resource for writers at any stage of their career seeking to understand the art and craft of factual narrative.

Bridging the Gap Between AI, Cognitive Science, and Narratology With Narrative Generation

IGI Global The use of cognitive science in creating stories, languages, visuals, and characters is known as narrative generation, and it has become a trending area of study. Applying artificial intelligence (AI) techniques to story development has caught the attention of professionals and researchers; however, few studies have inherited techniques used in previous literary methods and related research in social sciences. Implementing previous narratology theories to current narrative generation systems is a research area that remains unexplored. Bridging the Gap Between AI, Cognitive Science, and Narratology With Narrative Generation is a collection of innovative research on the analysis of current practices in narrative generation systems by combining previous theories in narratology and literature with current methods of AI. The book bridges the gap between AI, cognitive science, and narratology with narrative generation in a broad sense, including other content generation, such as a novels, poems, movies, computer games, and advertisements. The book emphasizes that an important method for bridging the gap is based on designing and implementing computer programs using knowledge and methods of narratology and literary theories. In order to present an organic, systematic, and integrated combination of both the fields to develop a new research area, namely post-narratology, this book has an important place in the creation of a new research area and has an impact on both narrative generation studies, including AI and cognitive science, and narrative studies, including narratology and literary theories. It is ideally designed for academicians, researchers, and students, as well as enterprise practitioners, engineers, and creators of diverse content generation fields such as advertising production, computer game creation, comic and manga writing, and movie production.

Selecting the Mercury Seven

The Search for America's First Astronauts

Springer Science & Business Media The names of the seven Mercury astronauts were announced in April 1959 amid a flurry of publicity and patriotism. This work provides biographical details of all thirty-two finalists for the seven coveted places as America's pioneering astronauts. All of the candidates were among the nation's elite pilots involved in testing new supersonic aircraft capabilities. Most had served as wartime fighter and bomber pilots; some were test pilots on top secret and sophisticated aviation projects, while

others were fleet admirals, prisoners of war, and proposed pilots for spaceflight programs such as the Dyna-Soar (X-20). The names of all 32 finalists have been kept secret until very recently. "Selecting the Mercury Seven" also relates the history and difficulties behind the initial choice of candidates. The lives, motivations, military careers, and achievements of the unsuccessful twenty-five finalists are explored first in fully authorized biographies. Test pilots for the U.S. Navy, Air Force, and Marine Corps, each man has a fascinating and very different story to tell. All thirty-two men had to endure meticulous, demeaning, and brutal week-long medical examinations at the Lovelace Clinic in New Mexico. This was followed by another torturous week at the Wright Aeromedical Laboratory in Ohio, where they were subjected to extreme fitness and physiological testing, the sole purpose of which was to sort out the Supermen from the near-supermen. The final part of the book examines the accomplishments and spaceflights of the seven successful candidates, bringing their amazing stories right up to date.
