Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products. **March's Advanced Organic Chemistry Reactions, Mechanisms, and Structure John Wiley & Sons Interactions of Matter Holt Rinehart & Winston Chemistry 2e Science Spectrum Balanced Approach: Florida Edition The Science Teacher** SCC Library has 1964-cur. **Proceedings of the ...
