## **ACCOUNTING INFORMATION SYSTEMS FOR DECISION MAKING**

---

*Springer Science & Business Media* This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.

### **APPLICATIONS AND LESSONS LEARNED**

---

*Springer Nature* Blockchain and other trustless systems have gone from being relatively obscure technologies, which were only known to a small community of computer scientists and cryptologists, to mainstream phenomena that are now considered powerful game changers for many industries. This book explores and assesses real-world use cases and case studies on blockchain and related technologies. The studies describe the respective applications and address how these technologies have been deployed, the rationale behind their application, and finally, their outcomes. The book shares a wealth of experiences and lessons learned regarding financial markets, energy, SCM, healthcare, law and compliance. Given its scope, it is chiefly intended for academics and practitioners who want to learn more about blockchain applications.

### **TREATING VIOLENCE**

### **A GUIDE TO RISK MANAGEMENT IN MENTAL HEALTH**

---

*OUP Oxford* Treating Violence deals with the problem of violence by mental health patients. Over the last twenty years violence by the mentally ill has grown from just a peripheral concern to dominate debate about services. Scientific studies have established beyond reasonable doubt that mental disorders lead to violence in a minority of sufferers,

whilst a series of homicide inquiries brought the media spotlight to bear on the real and imagined failings of mental health services. Consequently, health services have had violence risk assessment thrust upon them by worried managers and politicians. Clinicians were bewildered by the growing number of risk scales and they felt vulnerable to criticism when things went wrong. This book provides a way out of the confusion. It summarises the evidence, critically reviews risk assessment methods, and presents a strong case for improving management through structured clinical assessment. In this provocative and controversial account, standardised risk assessment is discussed in a critical, non-technical way, with a reminder that nobody can predict the future. There is advice for the clinician on when and how to use standardised assessment, along with a strong defence of clinical methods. Topics include: research on violence, mental health, and risk prediction; the ethics of violence risk assessment; homicide inquiries in the UK, with the results of a new study reviewing their findings; a discussion of professional attitudes towards violence risk; a description of risk assessment tools and recommendations for their use; and a strong defence of structured clinical assessment as the best way of managing risk. This is a book that should be read by anybody working in front line mental health services or criminal justice. It will also be of interest to those who have read the headlines about mental illness and violence and want to know more about the facts and the controversies that lie behind them.

## KIDNEY INFLAMMATION, INJURY AND REGENERATION

---

*MDPI Acute kidney injury (AKI) is still associated with high morbidity and mortality incidence rates, and also bears an elevated risk of subsequent chronic kidney disease. Although the kidney has a remarkable capacity for regeneration after injury and may recover completely depending on the type of renal lesions, the options for clinical intervention are restricted to fluid management and extracorporeal kidney support. The development of novel therapies to prevent AKI, to improve renal regeneration capacity after AKI, and to preserve renal function is urgently needed. The Special Issue covers research articles that investigated the molecular mechanisms of inflammation and injury during different renal pathologies, renal regeneration, diagnostics using new biomarkers, and the effects of different stimuli like medication or bacterial components on isolated renal cells or in vivo models. The Special Issue contains important reviews that consider the current knowledge of cell death and regeneration, inflammation, and the molecular mechanisms of kidney diseases. In addition, the potential of cell-based therapy approaches that use mesenchymal stromal/stem cells or their derivatives is summarized. This edition is complemented by reviews that deal with the current data situation on other specific topics like diabetes and diabetic nephropathy or new therapeutic targets.*

**HOW TO DO YOUR CASE STUDY**

---

---

**A GUIDE FOR STUDENTS AND RESEARCHERS**

---

*SAGE Case Study* is one of the most widely applied methods of research and instruction in use today. Cases are used to frame research, aid teaching and help learning the world over. Yet, despite being so widely used, there remains a great deal of uncertainty about what constitutes case study research and how case studies should be designed and carried out. In this lucid, accessible and often witty new text, Gary Thomas introduces students and researchers to the basics of case study research. Using a wide range of real-life examples, this book sets out for those new to the method how best to design and carry out case studies in the social sciences and humanities. *How to do your case study: a guide for students and researchers* deals with the core issues and methods that anyone new to case study will need to understand: - What is a case study? - When and why should case study methods be used? - How are case studies designed? - What methods can be used? - How do we analyse and make sense of our data? - How do we write up and write about our case? *How to do your Case Study* will be essential reading for any student or researcher in the Social Sciences, Health Sciences, in Business Studies, in Education and the Humanities.
