INTERNATIONAL COMMERCE

GLOBAL MARKETING MANAGEMENT

John Wiley & Sons Global Marketing Management, 8th Edition combines academic rigor, contemporary relevance, and student-friendly readability to review how marketing managers can succeed in the increasingly competitive international business environment. This in-depth yet accessible textbook helps students understand state-of-the-art global marketing practices and recognize how marketing managers work across business functions to achieve overall corporate goals. The author provides relevant historical background and offers logical explanations of current trends based on information from marketing executives and academic researchers around the world. Designed for students majoring in business, this thoroughly updated eighth edition both describes today's multilateral realities and explores the future of marketing in a global context. Building upon four main themes, the text discusses marketing management in light of the drastic changes the global economy has undergone, the explosive growth of information technology and e-commerce, the economic and political forces of globalization, and the various consequences of corporate action such as environmental pollution, substandard food safety, and unsafe work environments. Each chapter contains review and discussion questions to encourage classroom participation and strengthen student learning.

U.S. HEALTH IN INTERNATIONAL PERSPECTIVE

SHORTER LIVES, POORER HEALTH

National Academies Press The United States is among the wealthiest nations in the world, but it is far from the healthiest. Although life expectancy and survival rates in the United States have improved dramatically over the past century, Americans live shorter lives and

experience more injuries and illnesses than people in other high-income countries. The U.S. health disadvantage cannot be attributed solely to the adverse health status of racial or ethnic minorities or poor people: even highly advantaged Americans are in worse health than their counterparts in other, "peer" countries. In light of the new and growing evidence about the U.S. health disadvantage, the National Institutes of Health asked the National Research Council (NRC) and the Institute of Medicine (IOM) to convene a panel of experts to study the issue. The Panel on Understanding Cross-National Health Differences Among High-Income Countries examined whether the U.S. health disadvantage exists across the life span, considered potential explanations, and assessed the larger implications of the findings. *U.S. Health in International Perspective* presents detailed evidence on the issue, explores the possible explanations for the shorter and less healthy lives of Americans than those of people in comparable countries, and recommends actions by both government and nongovernment agencies and organizations to address the U.S. health disadvantage.

ENCYCLOPEDIA OF GLOBAL ENVIRONMENTAL GOVERNANCE AND POLITICS

Edward Elgar Publishing *The Encyclopedia of Global Environmental Governance and Politics* surveys the broad range of environmental and sustainability challenges in the emerging Anthropocene and scrutinizes available concepts, methodological tools, theories and approaches, as well as overlaps with adjunct fields of study. This comprehensive reference work, written by some of the most eminent academics in the field, contains 68 entries on numerous aspects across 7 thematic areas, including concepts and definitions; theories and methods; actors; institutions; issue-areas; cross-cutting questions; and overlaps with non-environmental fields. With this broad approach, the volume seeks to provide a pluralistic knowledge base of the research and practice of global environmental governance and politics in times of increased complexity and contestation. Providing its readers with a unique point of reference, as well as stimulus for further research, this *Encyclopedia* is an indispensable tool for anyone interested in the politics of the environment, particularly students, teachers and researchers.

OPERATIONS RESEARCH AND ENVIRONMENTAL MANAGEMENT

Springer Science & Business Media The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics, ranging from economics to engineering, from environmental management at the industry or regional level to basic mathematical modeling research. It is the combination of the activities on these last two topics that led the Fondazione to organise, with the University of Geneva, a workshop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management. In the recent past, attention has often been devoted to global environmental issues in which the level of policy making is either international, through multi-country agreements on emission control, or national, when environmental policies are designed to control domestic pollution. Many environmental problems, however, have a local or regional dimension. Even when their dimension is global, e. g. in the case of the greenhouse gas effect, relevant decisions on emission control, such as the adoption of energy saving utilities, are taken at the local level. In many countries, the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources. It is therefore important to analyze the way in which local or regional authorities optimise their environmental management.

IBM DB2 11 FOR Z/OS BUFFER POOL MONITORING AND TUNING

IBM Redbooks IBM® DB2® buffer pools are still a key resource for ensuring good performance. This has become increasingly important as the difference between processor speed and disk response time for a random access I/O widens in each new generation of processor. An IBM System z® processor can be configured with large amounts of storage, which if used wisely, can help compensate by using storage to avoid synchronous I/O. Several changes in buffer pool management have been provided by DB2 10 and DB2 11. The purpose of this IBM Redpaper™ is to cover the following topics: Describe the functions of the DB2 11 buffer pools Introduce a number of matrixes for read and write performance of a buffer pool Provide information about how to set up and monitor the DB2 buffer pools The paper is intended to be read by DB2 system administrators, but it might be of interest to any IBM z/OS® performance specialist. It is assumed that the reader is familiar with DB2 and performance tuning. In this paper, we also assume that you are familiar with DB2 11 for z/OS performance. See DB2 11 for z/OS Technical Overview, SG24-8180; and DB2 11 for z/OS Performance Topics, SG24-8222, for more information about DB2 11 functions and their performance.

GLOBAL MANUFACTURING MANAGEMENT

FROM EXCELLENT PLANTS TOWARD NETWORK OPTIMIZATION

Springer Nature Using site-specific optimization approaches in international manufacturing networks is increasingly proving insufficient. To solve this problem, several holistic and integrated alternatives have been developed to reflect a global perspective. This book presents advances in the St. Gallen Global Manufacturing Network Model and its application in numerous industry-, benchmarking- and research projects. The contents combine data-driven solutions with qualitative management frameworks for the strategic optimization of international manufacturing networks. In the first part, the book addresses the foundation of manufacturing network management and further describes the St. Gallen Operational Excellence approaches to manage plant performance. On this basis, the authors show how plant- and network-level performance can be enhanced via key improvement domains (e.g., strategy, configuration, coordination, performance management, digitalization). In turn, the second part demonstrates the application of the constructs in manufacturing companies from various industries. By combining research and practice, the book offers unique perspectives on the management of global production striving toward higher performance on manufacturing site and network level.

ENVIRONMENTAL MANAGEMENT IN A LOW CARBON ECONOMY

Routledge Each government recognises that there is a potential loss of competitive advantage of its business sector if future economic growth strategies are not aligned with a low carbon future. Some multinational organizations recognise this imperative and the importance of aligning business activities to a more sophisticated and flexible environmental management system that also incorporates quality, safety, occupational health and corporate ethics. An organisation's Environmental Management System (EMS) has, traditionally, been designed to address legislative and regulatory requirements. It has now become a measure of an organisations attitude to balancing environmental, economic, cultural and social needs of its trading communities. By using real world case studies this text positions EMS as a core and critical management tool and a key requirement for businesses long term survival. It provides fundamental building blocks to implement an environmental management system and clearly illustrates how it can be positioned within an organization to deliver innovative products and services to compete in a low carbon economy. *Environmental Management*

in a Low Carbon Economy will prepare students and professionals alike with the ability and understanding to implement an environmental management system which in turn will aid organizations in facilitating their transition to operate in a low carbon economy.

URBAN HEALTH, SUSTAINABILITY, AND PEACE IN THE DAY THE WORLD STOPPED

Springer Nature This book covers the nexus between urban health, sustainability, and peace. 'Urban Health, Sustainability, and Peace' is the first book that attempts to put these three critical areas together. This novelty approaches the subject matter by delving into evaluating what works, what does not work, and what should be done to achieve healthy cities. We believe this book will be beneficial to a wide range of stakeholders, particularly policymakers, planners, and developers, who continuously shape and reshape the structure and environments of our cities and communities. Unfortunately, in most cases, the healthiness of the cities may not be of their immediate concern. Nevertheless, it is the concern of the end-users, citizens, or simply those who live and work in cities and communities worldwide. To safeguard peace in cities, one has to consider sustaining urban health; and that is the main aim of this book. The ongoing pandemic gives us an excellent reason to study cities' health. During such a disruptive time, we detect many flaws in cities and communities around the world. We primarily identify the negative impacts on sustainability and peace in cities. In order

to sustain a healthy city, this book evaluates six sustainability dimensions of physical, environmental, economic, social, institutional, and technical. It then utilizes eight primary dimensions of positive peace, evaluating critical areas for future considerations in urbanism. These considerations include making cities smarter, more resilient, and more sustainable. The book's ultimate goal is to highlight how we should progress to maintain and sustain urban health. As a continuation to 'The City in Need,' this book covers the nexus between urban health, sustainability, and peace. Furthermore, by reflecting on the ongoing pandemic crisis, metaphorically labelled as 'The Day the World Stopped,' we delve into some key areas beyond the usual planning and policy guidelines. Lastly, the book intends to highlight what has not been studied before, i.e., the relationship between urban health, sustainability, and peace.
