Psychology Around Us

John Wiley & Sons Comer and Gould's Psychology Around Us demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter includes sections on human development, brain function, individual differences and abnormal psychology that occur in that area. These "cut-across" sections highlight how the different fields of psychology are connected to each other and how they connect to everyday life. Every chapter begins with a vignette that shows the power of psychology in understanding a whole range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).

The Weirdest People in the World

How the West Became

Psychologically Peculiar and Particularly Prosperous

Penguin UK 'A landmark in social thought. Henrich may go down as the most influential social scientist of the first half of the twenty-first century'

MATTHEW SYED Do you identify yourself by your profession or achievements, rather than your family network? Do you cultivate your unique attributes and goals? If so, perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich and Democratic. Unlike most who have ever lived, WEIRD people are highly individualistic, nonconformist, analytical and control-oriented. How did WEIRD populations become so psychologically peculiar? What part did these differences play in our history, and what do they mean for our collective identity? Joseph Henrich, who developed the game-changing concept of WEIRD, uses leading-edge research in anthropology, psychology, economics and evolutionary biology to explore how changing family structures, marriage practices and religious beliefs in the Middle Ages shaped the Western mind, laying the foundations for the world we know today. Brilliant, provocative, engaging and surprising, this landmark study will revolutionize your understanding of who - and how - we are now.

Case Studies in Abnormal Psychology

The Empirically Supported Approach

Macmillan Higher Education Fully updated for DSM-5, this exciting revision complements the abnormal psychology course by providing 17 case histories based on the authors' clinical experiences. Each case study goes beyond DSM-5 diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific treatment plan, the actual treatment conducted, and assessment questions for students. The casebook also provides three "You Decide" cases -- written without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies. This new edition adds assessment questions to the end of each case and also features three brand new cases: hoarding, somatic symptom disorder, and gender dysphoria.

Recognizing Race and Ethnicity

Power, Privilege, and Inequality

Hachette UK Despite promising changes over the last century, race remains a central organizing principle in US society, a key arena of inequality, power, and privilege, and the subject of ongoing conflict and debate. In this second edition of *Recognizing Race and Ethnicity*, Kathleen J. Fitzgerald continues to examine the sociology of race and encourages students to think differently by challenging the notion that we are, or should even aspire to be, color-blind. Fitzgerald considers how race manifests in both significant and obscure ways by looking across all racial/ethnic groups within the socio-historical context of institutions and arenas, rather than discussing each group by group. Incorporating recent research and contemporary theoretical perspectives, she guides students to examine racial ideologies and identities as well as structural racism; at the same time, she covers topics like popular culture, sports, and interracial relationships. This latest edition includes an expanded look at global perspectives on racial inequality, including international migration and Islamophobia; updated examples of contemporary issues, including the Black Lives Matter movement; more emphasis on intersectionality,

specifically the ways sexuality and race intersect; and an extended discussion on why the sociology of race and the sociological imagination matter. *Recognizing Race and Ethnicity* continues to reflect the latest sociological research on race/ethnicity and provides unparalleled coverage of white privilege while remaining careful not to treat "white" as the norm against which all other groups are defined.

Particulars and Universals in Clinical and Developmental Psychology

Critical Reflections - A book honoring Roger Bibace

IAP What sparks a psychologist's interest in a certain phenomenon? Is it a symptom, a syndrome, a treatment, the usual, the exceptional, the group,

the individual? An epistemologist, for example, focuses on the group and delivers group results. The clinician has to focus on the patient, although the patient may be perceived as one of a group (e.g., all patients with the same disease). The patient usually focuses on the clinician, but can take other opinions into account; especially, when the clinician is not considered to be the only authority. These dynamics - observable in therapy as well as in research - are critically reflected in this book, not only highlighting differences, but also commonalities individuals share: They all filter information and concentrate on certain aspects according to their socialization. They all have different expectations and can, yet, all deal with the same objective. Communication and building relationships seem to be vital - this book aims to support this quest by moving from the universal to the particular.

Clinical and Educational Child Psychology

An Ecological-Transactional Approach to Understanding Child Problems and Interventions

John Wiley & Sons Clinical and Educational Child Psychology “There is no shortage of books on developmental psychopathology, but what is unique about this one is the effort to bridge clinical and educational practice with school practice. It is very well conceptualized, and the ecological and transactional approach is very appropriate to the subject matter. In fact, it is the only framework capable of providing a full picture of children’s mental health problems. This book is highly relevant for psychologists working with children and families, as well as for teachers and special education professionals.” Isaac Prilleltensky, PhD, Dean, School of Education and Human Development, Professor of Educational and Psychological Studies, University of Miami **Clinical and Educational Child Psychology: An Ecological-transactional Approach to Understanding Child Problems and Interventions** examines developmental patterns in children aged 3 to 18 and the challenges that influence their developmental trajectory. Adopting a transactional-ecological perspective, Linda Wilmhurst explores the reasons why some children exposed to a variety of stressors may become vulnerable to a host of clinical, educational, and mental health problems. Initial chapters explore theoretical models and developmental milestones from early childhood through adolescence. Coverage also includes a variety of contemporary issues in the

psychopathology of children and adolescents, with discussion of neurodevelopmental and disruptive behavior disorders, anxiety and mood disorders, attention and learning disorders, later onset disorders such as substance abuse and eating disorders, and issues of maltreatment that can result in trauma disorders. Through an innovative presentation that combines clinical and educational psychological approaches, *Clinical and Educational Child Psychology* offers unique insights into our understanding of behavioral issues during the transition from childhood to adolescence.
