Designing Software for the Mobile Context

A Practitioner's Guide

Springer Science & Business Media **Roman Longoria The goal of this book is to provide a useful and timely guide to the practitioner who designs or develops mobile applications. The contributors to this book are leaders in the user interface (UI) community actively working in mobile platform technol ogy and mobile application design. Thus, this book offers the reader unique insight into the latest technologies, market trends, design ideas, and usability data. We provide the reader with the latest information that will have direct and immediate impact on a broad scope of product design decisions, including those for voice, phone, and personal digital assistant (PDA) applications. In other words, this book is written by practitioners, for practitioners. When I approached my coauthors about writing a chapter, I had only a few criteria. First, each author should have unique experience and expertise about a certain aspect of mobile applications. Second, that the authors be able to provide an introduction to the technologies with which they work. Third, that each chapter include case studies and lessons learned from empirical usability evaluations. And fourth, that each author include in the chapter some fundamental knowledge that they wish they had known when they got started designing for the mobile context.**

Global Mobile Satellite Communications

For Maritime, Land and Aeronautical Applications

Springer Science & Business Media **Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.**

National Project Management

The Sunshine Project and the Rise of the Japanese Solar Industry

Springer Nature This book clarifies the challenges and outcomes of the Sunshine Project, a national project in Japan for developing new energy that was launched about 40 years ago at the time of the first oil crisis in the early 1970s and ended, as planned, in the early 2000s. The Sunshine Project was the government's national project for developing new energy technologies such as solar energy and other natural energy sources—what we call renewable energy today. The book considers why policies were successful in some areas but did not have the intended effect in other areas. It explains how technology innovation was employed to achieve energy policy goals and to tackle environmental issues. If we can present suggestions for how to structure national projects, it may also be possible to identify ways for industry, government, and academia to come together to find solutions not only to environmental energy problems, but also to other social problems. Herein lies the goal of this book. Although the development of new energy is the main subject of the book, the author also scrutinizes the governmental decision-making process involved in planning policy, the creative process, and the design of systems of collaboration between industry, government, and academia as well as cases where corporations have developed commercial versions of new energy products. The main part of the book consists of three case studies interspersed with two reflective chapters. The first case study describes the Sunshine Project from the perspective of project management based on the perspective of government. The second case study is a detailed examination of the routines in all organizations, whether industry, government, or academia, and of the autonomy of the project organization. The third case study increases the degree of detail to focus on the smallest unit of analysis, the intentions and motivations of key individuals participating in the project.

Plunkett's Wireless, Wi-Fi, RFID and Cellular Industry Almanac 2008

The Only Comprehensive Guide to the Wireless Industry

Plunkett Research, Ltd. **The cell phone is the fastest-selling consumer electronic in the world. On a global basis, over 800 million cellular telephones are sold yearly. More camera-equipped cell phones are sold each year than stand alone digital cameras. Rapid development of new technologies is leading to ever more versatile, multipurpose mobile devices, including 3G Internet-enabled cell phones and PDAs. Meanwhile, wireless networking and wireless Internet access are developing and expanding on a global basis at a rapid rate. Booming technologies include such 802.11 standards as Wi-Fi and WiMax, as well as Ultra Wide Band (UWB) and Bluetooth. Telematics, intelligent transportation systems (ITS) and satellite radio will soon create an entertainment, navigation and communications revolution within automobiles and trucks. Meanwhile, RFID (radio frequency identification) will revolutionize wireless tracking, inventory and logistics at all levels, from manufacturing to shipping to retailing. These developments are creating challenges for legacy companies and opportunities for nimble marketers and managers. Plunkett's Wireless, Wi-Fi, RFID & Cellular Industry Almanac 2008 covers such sectors. Our coverage includes business trends analysis and industry statistics. We also include a wireless and cellular business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 350 company profiles include complete business descriptions and up to 27 executives by name and title.**

UbiComp 2004: Ubiquitous Computing

6th International Conference, Nottingham, UK, September 7-10, 2004, Proceedings

Springer **Welcome to the proceedings of UbiComp 2004. In recent years the ubiquitous computing community has witnessed a sign- cant growth in the number of conferences in the area, each with its own disti- tive characteristics. For UbiComp these characteristics have always included a high-quality technical program and associated demonstrations and posters that cover the full range of research being carried out under the umbrella of ubiq- tous computing. Ours is a broaddiscipline andUbiComp aims to be aninclusive forum that welcomes submissions from researchers with many di?erent ba- grounds. This year we received 145 submissions. Of these we accepted 26, an acceptance rate of just under 18%. Of course acceptance rate is simply a m- sure of selectivity rather than quality and we were particularly pleased this year to note that we had a large number of high-quality submissions from which to assemble the program for 2004. The broad nature of ubiquitous computing research makes reviewing Ubi- Comp submissions a particular challenge. This year we adopted a new process for review and selection that has, we hope, resulted in all authors obtaining - tremely detailed feedback on their submission whether or not it was accepted for publication. We believe the process enabled us to assemble the best pos- ble program for delegates at the conference. If you submitted a paper, we hope that you bene?ted from the feedback that your peers have provided, and if you attended UbiComp 2004 we hope that you enjoyed the technical program.**
