International Harvester, Hough and Dresser

Construction and Industrial Machines

A history of the industrial and construction machines built by the International Harvester Company along with Hough and Dresser.

Payline

International Harvester's Construction Equipment Division

Motorbooks To many people, a wheel loader is called a PayLoader, thanks to the dominance of the classic rubber-tired, hydraulic front-end loader first developed by the Frank G. Hough company in 1944. When International Harvester acquired Hough and combined it with its struggling construction equipment division in 1974, PayLine was born, with the PayLoader as its signature machine. This book tells the story of PayLine, which marked the high point of International Harvester's foray into construction equipment. Oscar H. Will III chronicles the company's early efforts, its success with machines ranging from the PayLoader to the PayHauler, and its expansion right up to its sale to Dresser Industries in 1982. With attention to each particular model, including history, specifications, market position, and color photographs of these mighty machines at work, this book is a fitting tribute to International Harvester's giants in the earth, and a critical chapter in the story of American industry.

Giant Earthmovers : An Illustrated History

A comprehensive review of earthmoving and construction equipment from the birth of primitive industrial tools to today's awe-inspiring machines! The biggest haulers, dozers, scrapers and unusual specialty equipment in the field are presented here in over 500 black-and-white photographs. The author's expertly written text details machine categories and discusses the history, evolution, design and manufacture of these industry giants. Packed full of top-quality archival photographs, most taken from manufacturer archives.

International Harvester Tractors

Motorbooks International If you enjoyed Leffingwell's best-selling *The American Farm Tractor*, this stunning volume is an absolute must read! International Harvester Tractors beautifully chronicles the history of IH tractors, from the very first tractor through the IH ag division's merger with Case in 1985. In addition to hundreds of nostalgic Farmall and IH photographs Leffingwell serves up an unprecedented collection of rare and unusual machines. The machines Leffingwell found in his travels across the US will surprise and delight even the hard-core IH fan! Exceptionally well produced in classic Leffingwell style. Recommended.

The Earthmover Encyclopedia

"This colossal reference book documents the timeless urge to reshape the world, and the machines used to do so from the 1088's to today. From utility tractors and loaders up to the largest diggers and bulldozers, every piece of heavy equipment is listed here by model and manufacturer, making this the most exhaustive book on the world's most hard-working vehicles and machines"--Publisher's description.

Yellow Steel

The Story of the Earthmoving Equipment Industry

University of Illinois Press In **Yellow Steel**, the first overarching history of the earthmoving equipment industry, William Haycraft examines the tremendous increase in the scope of mining and construction projects, from the Suez Canal through the interstate highway system, made possible by innovations in earthmoving machinery. Led by Cyrus McCormick's invention in 1831 of a practical mechanical reaper, many of the builders of today's massive earthmoving machines began as makers of reapers, plows, threshers, and combines. Haycraft traces the efforts of manufacturers such as Caterpillar, Allis-Chalmers, International Harvester, J. I. Case, Deere, and Massey-Ferguson to diversify from farm equipment to specialized earthmoving equipment and the important contributions of LeTourneau, Euclid, and others in meeting the needs of the construction and mining industries. He shows how postwar economic and political events, especially the creation of the interstate highway system, spurred the development of more powerful and more agile machines. He also relates the precipitous fall of several major American earthmoving machine companies and the rise of Japanese competitors in the early 1980s. Extensively illustrated and packed with detailed information on both manufacturers and machines, **Yellow Steel** knits together the diverse stories of the many companies that created the earthmoving equipment industry--how they began, expanded, retooled, merged, succeeded, and sometimes failed. Their history, a step-by-step linking of need and invention, provides the foundation for virtually all modern transportation, construction, commerce, and industry.

Elsevier Science Limited Reflects the international nature of FMS technology with contributions from both manufacturers & users of FMS. Flexible manufacturing is a technique whereby a wide range of components can be manufactured on linked machines which are under computer control. Under ideal conditions, the components can be manufactured at random & in any order. The benefits of FMS are reduced inventories & work in progress, & reduced floor area & manning. FMS can lead to increased profitability.
