Weakly Interacting Molecular Pairs: Unconventional Absorbers of Radiation in the Atmosphere

Springer Science & Business Media The Advanced Research Workshop entitled "Weakly Interacting Molecular Pairs: Unconventional Absorbers of Radiation in the Atmosphere" was held in Abbaye de Fontevraud, France, from April 29 to May 3, 2002. The meeting involved 40 researchers from 14 countries. The goal of this meeting was to address a problem that the scientific community is aware of for many years. Up now, however, the solution for this problem is far from satisfactory. Pair effects are called unconventional in the title of this meeting. In specific spectral domains and/or geophysical conditions they are recognized to play a dominant role in the absorption/emission properties of the atmosphere. Water vapor continuum absorption is among the most prominent examples. Permanently improving accuracy of both laboratory studies and field observations requires better knowledge of the spectroscopic features - attributable to molecular pairs which may form at equilibrium. The Workshop was targeted both to clarify the pending questions and, as far as feasible, to trace the path to possible answers since the underlying phenomena are yet incompletely understood and since a reliable theory is often not available. On the other hand, the lack of precise laboratory data on bimolecular absorption is often precluding the construction of reliable theoretical models. Ideally, the knowledge accumulated in the course of laboratory studies should correlate with the practical demands from those who are carrying out atmospheric field measurements and space observations.

Instructor's Manual to Chris Park's The Environment

Routledge The very survival of the planet is at risk: human misuse of natural resources and disturbance of natural environmental systems is pushing the Earth to the limits of its capacity. The Environment is a lively, comprehensive introduction for environmental study, explaining how the environment functions, how environmental systems relate, and the ways in which people and environment interact. Focusing particularly on the environmental impacts of human activities, the book explains the ways in which an understanding of basic physical principles can help us to use the environment and its resources. Three particular approaches are adopted throughout: * a systems approach - highlighting the interactions and interrelationships between the environment's diverse parts * an interdisciplinary perspective - stepping back from individual subject focus to examine the complex breadth of the environment's diversity * a global perspective - incorporating stimulating examples drawn from around the world to illustrate broad global patterns and contrasts. The Environment explains the principles and applications of the different parts of the Earth's system: the lithosphere, the atmosphere, the hydrosphere, and explains the interrelationship across these systems. It explores the present environmental crisis, examines how the planet Earth fits into the wider universe, and explores human-environment interactions, to offer a clear understanding of the diverse and complex environment we live in and new ways of thinking about the way it is changing. Specific features include: * Lively, stimulating and accessible text * Superb illustrations: 4-colour plate sections * Case studies drawn from around the world, boxed within the text * Chapter summaries * Annotated further reading lists A Lecturer's Manual is available to accompany the text

Conservation: Ocean Water Resources: How Changes in Salt Water Could Change Our Lives Gr. 5-8

Classroom Complete Press **This is the chapter slice "How Changes in Salt Water Could Change Our Lives Gr. 5-8" from the full lesson plan "Conservation: Ocean Water Resources"**. The oceans contain 97% of the Earth's water, cover 71% of its surface, and hold 50-80% of all life on the planet. Our resource explores the importance of conserving this vast area. Design a board game that illustrates the effects of climate change on Earth's oceans. See how the water cycle explains why most of Earth's salt water is found in the oceans. Find out how climate change will affect ocean currents, resulting in a dramatic change to the farming and fishing industries. Explain how an increase in human population can cause some salt lakes to shrink. Conduct a case study on a container ship that lost several containers in a storm in the north Pacific Ocean. Make your own salt water to represent Earth's oceans and experience what it would be like to visit them. Get tips on what we can do to help protect ocean water. Written to Bloom's Taxonomy and STEAM initiatives, additional hands-on activities, graphic organizers, crossword, word search, comprehension quiz and answer key are also included.
