PRACTICAL MACHINE LEARNING: INNOVATIONS IN RECOMMENDATION

"O'Reilly Media, Inc." Building a simple but powerful recommendation system is much easier than you think. Approachable for all levels of expertise, this report explains innovations that make machine learning practical for business production settings—and demonstrates how even a small-scale development team can design an effective large-scale recommendation system. Apache Mahout committers Ted Dunning and Ellen Friedman walk you through a design that relies on careful simplification. You'll learn how to collect the right data, analyze it with an algorithm from the Mahout library, and then easily deploy the recommender using search technology, such as Apache Solr or Elasticsearch. Powerful and effective, this efficient combination does learning offline and delivers rapid response recommendations in real time. Understand the tradeoffs between simple and complex recommenders Collect user data that tracks user actions—rather than their ratings Predict what a user wants based on behavior by others, using Mahoutfor co-occurrence analysis Use search technology to offer recommendations in real time, complete with item metadata Watch the recommender in action with a music service example Improve your recommender with dithering, multimodal recommendation, and other techniques

ECONOMIC MODELS AND ALGORITHMS FOR DISTRIBUTED SYSTEMS

Springer Science & Business Media Distributed computing paradigms for sharing resources such as Clouds, Grids, Peer-to-Peer systems, or voluntary computing are becoming increasingly popular. While there are some success stories such as PlanetLab, OneLab, BOINC, BitTorrent, and SETI@home, a widespread use of these technologies for business applications has not yet been achieved. In a business environment, mechanisms are needed to provide incentives to potential users for participating in such networks. These mechanisms may range from simple non-monetary access rights, monetary payments to specific policies for sharing. Although a few models for a framework have been discussed (in the general area of a "Grid Economy"), none of these models has yet been realised in practice. This book attempts to fill this gap by discussing the reasons for such limited take-up and exploring incentive mechanisms for resource sharing in distributed systems. The purpose of this book is to identify research challenges in successfully using and deploying resource sharing strategies in open-source and commercial distributed systems.

IMPLEMENTING THE IBM STORWIZE V7000 GEN2

IBM Redbooks Data is the new currency of business, the most critical asset of the modern organization. In fact, enterprises that can gain business insights from their data are twice as likely to outperform their competitors. Nevertheless, 72% of them have not started, or are only planning, big data activities. In addition, organizations often spend too much money and time managing where their data is stored. The average firm purchases 24% more storage every year, but uses less than half of the capacity that it already has. The IBM® Storwize® family, including the IBM SAN Volume Controller Data Platform, is a storage virtualization system that enables a single point of control for storage resources. This functionality helps support improved business application availability and greater resource use. The following list describes the business objectives of this system: To manage storage resources in your information technology (IT) infrastructure To make sure that those resources are used to the advantage of your business To do it quickly, efficiently, and in real time, while avoiding increases in administrative costs Virtualizing storage with Storwize helps make new and existing storage more effective. Storwize includes many functions traditionally deployed separately in disk systems. By including these functions in a virtualization system, Storwize standardizes them across virtualized storage for greater flexibility and potentially lower costs. Storwize functions benefit all virtualized storage. For example, IBM Easy Tier® optimizes use of flash memory. In addition, IBM Real-time CompressionTM enhances efficiency even further by enabling the storage of up to five times as much active primary data in the same physical disk space. Finally, high-performance thin provisioning helps automate provisioning. These benefits can help extend

the useful life of existing storage assets, reducing costs. Integrating these functions into Storwize also means that they are designed to operate smoothly together, reducing management effort. This IBM Redbooks® publication provides information about the latest features and functions of the Storwize V7000 Gen2 and software version 7.3 implementation, architectural improvements, and Easy Tier.

MASTERMINDING THE DEAL

BREAKTHROUGHS IN M&A STRATEGY AND ANALYSIS

Kogan Page Publishers Following a quiet period in global M&A activity, a new boom seems to be underway, but in an age where two-thirds of all merger deals can be said to fail (where deals fall short of the minimum required financial returns to the acquiring company), how can future success be guaranteed? And what can acquirers, and their shareholders and advisers, do to improve the chances of success? Masterminding the Deal looks at performance in two critical areas - merger segmentation (the identification of critical characteristics and attributes separating more successful mergers from the rest) and category-specific synergy diagnosis (the differentiation of synergy benefits - expenses, revenues, tax - to ensure maximum rewards). Through this in-depth analysis, the book provides the managers and advisers of acquiring firms with concise and actionable frameworks to improve and enhance merger performance. Masterminding the Deal will help you to identify and apply the key components of merger success.

RE-FORMATIONS (AFTER BACH)

From the composer: In the organ work "Re-Formations (after Bach)," my source material comes from three chorale preludes for organ by the 18th century master. These are paired with material not typically associated with Baroque organ music: early modernism and 20th century popular music and dance styles. The chorale tunes and Bach's figurations remain recognizable, but they are not merely quoted or arranged. They are "re-formed" to become elements within the themes and structure of three new movements. -Mark Kurtz

GLORIES OF THE HUDSON

FREDERIC EDWIN CHURCH'S VIEWS FROM OLANA

Cornell University Press "In 1609, Henry Hudson sailed up the river that now bears his name. The exhibition and its accompanying publication Glories of the Hudson: Frederic Edwin Church's Views from Olana mark the quadricentennial of his discovery by highlighting Frederic Church's sketches of the prospect from his hilltop home overlooking the river. Church made his first sketch of the Hudson River and Catskill Mountains from Red Hill--the south end of the property that became his home, Olana--in 1845, on a sketching expedition suggested by his teacher Thomas Cole. Returning to the Hudson Valley in 1860 as the nation's most famous and best-paid artist, Church settled on a farm on the lower slope of the Sienghenbergh, securing for himself and his new wife a splendid vantage point for studying, sketching, and painting the river. Church continued to add land to his property, attaining new and varied vistas of the river, and crowned the estate with a Persian-inspired house designed to frame splendid views of the Hudson River and Catskill Mountains. Church never tired of his views of the river, documenting his passion for the Hudson in paintings, oil sketches, and drawings. From Olana, he observed the transformations wrought by the changing seasons, weather, and light, capturing chilly winter snows, brilliant sunsets, and passing storms in sketches executed with a few brushstrokes or autumn colors and clear winter light in more finished easel paintings. The best of these are reproduced here, in eighty-three illustrations, sixty-nine in full color, some of them published for the first time. The essay by Evelyn D. Trebilcock and Valerie A. Balint, the introduction by Kenneth John Myers, and the foreword by John K. Howat together provide an absorbing narrative of the development of the Hudson River School and its most successful artist." -- Publisher's description.

BLUEPRINT FOR BLACK POWER

A MORAL, POLITICAL, AND ECONOMIC IMPERATIVE FOR THE TWENTY-FIRST CENTURY

Afrikan World Infosystems Afrikan life into the coming millennia is imperiled by White and Asian power. True power must nest in the ownership of the real estate wherever Afrikan people dwell. Economic destiny determines biologial destiny. 'Blueprint for Black Power' details a master plan for the power revolution necessary for Black survival in the 21st century. White treatment of Afrikan Americans, despite a myriad of theories explaining White behavior, ultimately rests on the fact that they can. They possess the power to do so. Such a power differential must be neutralized if Blacks are to prosper in the 21st century ... Aptly titled, 'Blueprint for Black Power' stops not at critique but prescribes radical, practical theories, frameworks and approaches for true power. It gives a biting look into Black potentiality.
