FIRST NATIONS SELF-GOVERNMENT

17 ROADBLOCKS TO SELF-DETERMINATION, AND ONE CHIEF'S THOUGHTS ON SOLUTIONS

Brush Education Indigenous Peoples in Canada are continuing to assert their right to self-determination in this era of reconciliation. While dozens of Indigenous communities have signed varying forms of self-government agreements with the federal government, Indigenous Nations still face many obstacles along the path to true self-determination. As a former Chief of Siksika Nation in southern Alberta, Leroy Wolf Collar dealt with many of the same problems other Indigenous Nations face across the country. From serious housing shortages to the lack of opportunities for youth, Chief Wolf Collar experienced the challenges and frustrations that come from operating in a colonial system still constrained by the Indian Act. How do Indigenous Peoples move on from this defective system? Chief Wolf Collar identifies 17 issues that currently hinder Indigenous Nations—including broken treaty promises, problems with common forms of band administration, and the intrusion of provincial governments—along with potential solutions to overcome them. This guide is for current and aspiring Indigenous leaders who want to increase their understanding of good governance, management, and leadership, as well as those who want to explore issues around Indigenous self-determination in Canada.

ENERGY ANTIMONOPOLY ACT OF 1979, S. 1246**HEARINGS BEFORE THE SUBCOMMITTEE ON ANTITRUST, MONOPOLY, AND BUSINESS RIGHTS OF THE COMMITTEE ON THE JUDICIARY, UNITED STATES SENATE, NINETY-SIXTH CONGRESS, FIRST SESSION****CHINA AND THE GLOBAL ENERGY CRISIS****DEVELOPMENT AND PROSPECTS FOR CHINA'S OIL AND NATURAL GAS**

Edward Elgar Publishing China's rapid economic development is having profound implications for energy resources. China has always been exceptionally reliant on its abundant coal, but consumption of oil and gas have grown rapidly since reform began in the 1980s. In spite of vigorous domestic development - most recently in the Tarim Basin - China is now consuming approximately 8 per cent of the world's oil output but producing only 4 per cent. China's emergence as an energy importer has given rise to concerns that it is a major contributor to recent turmoil in energy markets. This book examines China's record of oil and gas development, its refining capacity, and energy prospects. The authors conclude that there are no fundamental reasons for anxiety about China's demands on the world energy economy, but they emphasize that its energy future will depend critically on a continuation of reform and internationalization. China and the Global Energy Crisis is a concise but detailed study of these issues. This book will appeal not only to readers concerned with China and energy issues, but also to a wider readership seeking to understand China's development and its global meaning.
