Transhumanism

The History of a Dangerous Idea

David Livingstone Transhumanism is a recent movement that extols man's right to shape his own evolution, by maximizing the use of scientific technologies, to enhance human physical and intellectual potential. While the name is new, the idea has long been a popular theme of science fiction, featured in such films as 2001: A Space Odyssey, Blade Runner, the Terminator series, and more recently, The Matrix, Limitless, Her and Transcendence. However, as its adherents hint at in their own publications, transhumanism is an occult project, rooted in Rosicrucianism and Freemasonry, and derived from the Kabbalah, which asserts that humanity is evolving intellectually, towards a point in time when man will become God. Modeled on the medieval legend of the Golem and Frankenstein, they believe man will be able to create life itself, in the form of living machines, or artificial intelligence. Spearheaded by the Cybernetics Group, the project resulted in both the development of the modern computer and MK-Ultra, the CIA's "mind-control" program. MK-Ultra promoted the "mind-expanding" potential of psychedelic drugs, to shape the counterculture of the 1960s, based on the notion that the shamans of ancient times used psychoactive substances, equated with the "apple" of the Tree of Knowledge. And, as revealed in the movie Lucy, through the use of "smart drugs," and what transhumanists call "mind uploading," man will be able to merge with the Internet, which is envisioned as the end-point of Kabbalistic evolution, the formation of a collective consciousness, or Global Brain. That awaited moment is what Ray Kurzweil, a director of engineering at Google, refers to as The Singularity. By accumulating the total of human knowledge, and providing access to every aspect of human activity, the Internet will supposedly achieve omniscience, becoming the "God" of occultism, or the Masonic All-Seeing Eye of the reverse side of the American dollar bill.

Forensic Examination of Fibres

CRC Press In order for forensic fibre examiners to fully utilize fibre and textile evidence during their analysis, they require not only specialised forensic knowledge but also in-depth knowledge of fibres, yarns and fabrics themselves. Production, both the chemical and physical structure, and the properties of these materials is required in order to determine the value of fibre evidence. This includes knowing production figures, fashion changes, sudden arrivals of new materials, dye variability, and numerous other factors that may have a bearing on the information obtained. Fully updated with the latest advances, Forensic Examination of Fibres, Third Edition continues in the tradition of the First (1992) and Second Editions (1999) as the premier text on the subject of forensic fibre analysis. The international team of contributing authors detail the recovery of the evidence—through the different stages of laboratory examination—to the evaluation of the meaning of findings. The coverage has been considerably expanded, and all material, has been revised and wholly updated. Topics covered include examining damaged textiles, infrared microspectroscopy and thin

layer chromatography, and colour analyses. This edition also highlights the critical role of quality assurance in ensuring the reliability of the technical observations and results, and, in doing so, looks at the implications of supervisory managers and labs in the accurate and responsible analysis of such evidence. Features include: Outlining evidentiary process from collecting and preserving the evidence at the crime scene through the laboratory analysis of fibres Detailing the latest developments and emerging technologies including Kevlar and other such advances in fibre technology Coverage of a broad array of fibres both, natural (cellulose, protein, and mineral) and man-made fibres including synthetic, inorganic and regenerated Forensic Examination of Fibres, Third Edition is a much-needed update to the classic book, serving as an indispensable reference to crime scene technicians, laboratory forensic scientists and microscopists, students in police, forensic, and justice science programs.

First Platoon

A Story of Modern War in the Age of Identity Dominance

Penguin A powerful story of war in our time, of love of country, the experience of tragedy, and a platoon at the center of it all. This is a story that starts off close and goes very big. The initial part of the story might sound familiar at first: it is about a platoon of mostly nineteen-year-old boys sent to Afghanistan, and an experience that ends abruptly in catastrophe. Their part of the story folds into the next: inexorably linked to those soldiers and never comprehensively reported before is the U.S. Department of Defense's quest to build the world's most powerful biometrics database, with the ability to identify, monitor, catalog, and police people all over the world. First Platoon is an American saga that illuminates a transformation of society made possible by this new technology. Part war story, part legal drama, it is about identity in the age of identification. About humanity—physical bravery, trauma, PTSD, a yearning to do right and good—in the age of biometrics, which reduce people to iris scans, fingerprint scans, voice patterning, detection by odor, gait, and more. And about the power of point of view in a burgeoning surveillance state. Based on hundreds of formerly classified documents, FOIA requests, and exclusive interviews, First Platoon is an investigative exposé by a master chronicler of government secrets. First Platoon reveals a post-9/11 Pentagon whose identification machines have grown more capable than the humans who must make sense of them. A Pentagon so powerful it can cover up its own internal mistakes in pursuit of endless wars. And a people at its mercy, in its last moments before a fundamental change so complete it might be impossible to take back.

The Remembered Present

[Black Dog Pub Limited](#) As one of the leading figurative painters of his generation, the work of Andrzej Jackowski is mostly autobiographical, based on his early childhood memories, recollections of a family history in Poland and the feelings of alienation and enclosure that these experiences roused. Born to Polish parents, the first 11 years of Andrzej Jackowski's life were spent in a post-war refugee camp, and The Remembered Present delves into the resulting themes of alienation, family, childhood and nationality that are ever-present in the artist's work. Using powerful, insistent images from his past Jackowski explores ideas of human memory and psyche both on a personal and more collective level. Although personal in intention, his work is an embodiment of contemporary historical painting. The Remembered Present is the first profile on his hugely intriguing artist and includes essays by Timothy Hyman, Gabriel Josopovici and Michael Tucker.
