THE HOUSING BOMB

WHY OUR ADDICTION TO HOUSES IS DESTROYING THE ENVIRONMENT AND THREATENING OUR SOCIETY

JHU Press Have we built our way to ruin? Is your desire for that beach house or cabin in the woods part of the environmental crisis? Do you really need a bigger home? Why don't multiple generations still live under one roof? In *The Housing Bomb*, leading environmental researchers M. Nils Peterson, Tarla Rai Peterson, and Jianguo Liu sound the alarm, explaining how and why our growing addiction to houses has taken the humble American dream and twisted it into an environmental and societal nightmare. Without realizing how much a contemporary home already contributes to environmental destruction, most of us want bigger and bigger houses and dream of the day when we own not just one dwelling but at least the two our neighbor does. We push our children to "get out on their own" long before they need to, creating a second household where previously one existed. We pave and build, demolishing habitat needed by threatened and endangered species, adding to the mounting burden of global climate change, and sucking away resources much better applied to pressing societal needs. "Reduce, reuse, recycle" is seldom evoked in the housing world, where economists predict financial disasters when "new housing starts" decline and the idea of renovating inner city residences is regarded as merely a good cause. Presenting irrefutable evidence, this book cries out for America and the world to intervene by making simple changes in our household energy and water usage and by supporting municipal, state, national, and international policies to counter this devastation and overuse of resources. It offers a way out of the mess we are creating and envisions a future where we all live comfortable, nondestructive lives. The "housing bomb" is ticking, and our choice is clear—change our approach or feel the blast.

THE HOUSING BOMB

WHY OUR ADDICTION TO HOUSES IS DESTROYING THE ENVIRONMENT AND THREATENING OUR SOCIETY

JHU Press The "housing bomb" is ticking, and our choice is clear—change our approach or feel the blast.

LOSING PARADISE

THE GROWING THREAT TO OUR ANIMALS, OUR ENVIRONMENT,

Square One Publishers, Inc. The last decades of the twentieth century saw an unprecedented assault by humans on nature and animals throughout the world. Instead of moving toward a better world, we are now facing a tidal wave of ecological challenges that threatens to sweep away whatever progress we have achieved. In this landmark book, author Paul G. Irwin presents an alarming look at what we have done—and continue to do—to animals, to our environment, and to ourselves. *Losing Paradise* first examines the beliefs that lie at the core of our destructive actions—beliefs that place humans above and against nature. It then details the results of these distorted values, including the cruel treatment of animals through factory farming, hunting, and trapping, and the destruction of our environment. But while *Losing Paradise* shows the damage we have done, it also shows the steps we can take to build a truly humane society and reclaim our wondrous natural world. Most important, it reminds us of the paradise this earth can be for all God's creatures.

OUR COMMON FUTURE

ASSESSING THE THREAT OF WEAPONS OF MASS DESTRUCTION

THE ROLE OF INDEPENDENT SCIENTISTS

IOS Press *Assessing the Threat of Weapons of Mass Destruction* is a collection of papers delivered at the NATO Advanced Research Workshop of the same name, which examined the role of independent scientists in assessing WMD threat. Such threat assessment has a profound impact on the policies of governments and international organizations. It raises numerous questions: What exactly is an independent scientist and what threatens their independence? What role do cultural dependencies play within assessments?

UNDERSTANDING AND MANAGING THREATS TO THE ENVIRONMENT IN SOUTH EASTERN EUROPE

Springer This volume presents reflections on a variety of environmental issues in South-Eastern Europe from diverse contemporary scientific disciplines. The contributions address many crucial issues including national environmental policies, economic instruments for preventing crimes against the environment, international waste trafficking, threats to air, water and soil due to mining, management of dump areas, environment protection and food safety from a perspective of public health. The book will be a useful resource for researchers, developers and decision makers interested in the stability and sustainable development of the South-Eastern European countries.

THE MADHOUSE EFFECT

HOW CLIMATE CHANGE DENIAL IS THREATENING OUR PLANET, DESTROYING OUR POLITICS, AND DRIVING US CRAZY

Columbia University Press The award-winning climate scientist Michael E. Mann and the Pulitzer Prize-winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. *The Madhouse Effect* portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two

climate science crusaders enlivens the gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.

THE PRECAUTIONARY PRINCIPLE

PROTECTING PUBLIC HEALTH, THE ENVIRONMENT AND THE FUTURE OF OUR CHILDREN

The purpose of this publication is to provide the background rationale and support for WHO's working paper Dealing with uncertainty - how can the precautionary principle help protect the future of our children?, prepared for the Fourth Ministerial Conference on Environment and Health held in Budapest, Hungary, in June 2004. The debate around the precautionary principle has provided many insights into how to improve public health decision-making under conditions of uncertainty. This publication should further support approaches to attaining the concurrent goals of protecting adults, children and future generations and the ecosystems on which we depend and enhancing economic development, sustainability and innovation in science, research and policy. [Ed.]

THE WAY OF ABUNDANCE

ECONOMIC JUSTICE IN SCRIPTURE AND SOCIETY

Fortress Press Justice, even divine justice, is concrete. It addresses flesh-and-blood persons and the systems, structures, and conditions under which they live. God's vision of abundant human living is not restricted to the spiritual realm but extends even to our material circumstances. But in today's complex economy, what specific changes to public policies and institutions could lead to a just economy? In *The Way of Abundance*, economist and minister Edith Rasell examines Old and New Testament teachings on economic justice in the context of the ancient economic systems and circumstances they addressed. Drawing on the biblical narrative and on research from the social sciences, Rasell examines three eras--the ancient Israelites' settlements in Canaan, the time of the monarchies, and first-century Palestine--and describes the transition from a non-monetized, subsistence-based economy to a commercial one with wage labor, product markets, and a surplus that benefited a tiny elite. But across this vast expanse of time and economic transition, the Bible called for a just economy. And its vision of economic justice can be a vision for justice seekers today. The book concludes with specific public policy proposals and personal practices that would move contemporary society closer to the Bible's economic vision.

OUR COMMON AGENDA - REPORT OF THE SECRETARY-GENERAL

United Nations On the seventy-fifth anniversary of the United Nations, the world has faced its biggest shared test since the Second World War in the coronavirus disease (COVID-19) pandemic. Yet while our welfare, and indeed the permanence of human life, depend on us working together, international cooperation has never been harder to achieve. This report answers a call from UN Member States to provide recommendations to advance our common agenda and to respond to current and future challenges. Its proposals are grounded in a renewal of the social contract, adapted to the challenges of this century, taking into account younger and future generations, complemented by a new global deal to better protect the global commons and deliver global public goods. Through a deepening of solidarity—at the national level, between generations, and in the multilateral system—Our Common Agenda provides a path forward to a greener, safer and better future.

ENVIRONMENTAL SCIENCE

CREATING A SUSTAINABLE FUTURE

Jones & Bartlett Learning

SECURITY AND ENVIRONMENT IN THE MEDITERRANEAN

CONCEPTUALISING SECURITY AND ENVIRONMENTAL CONFLICTS : WITH 177 FIGURES AND 144 TABLES

Springer Science & Business Media In this volume security specialists, peace researchers, environmental scholars, demographers as well as climate, desertification, water, food and urbanisation specialists from the Middle East and North Africa, Europe and North America review security and conflict prevention in the Mediterranean. They also analyse NATO's Mediterranean security dialogue and offer conceptualisations on security and perceptions of security challenges as seen in North and South. The latter half of the book analyses environmental security and conflicts in the Mediterranean and environmental consequences of World War II, the Gulf War, the Balkan wars and the Middle East conflict. It also examines factors of global environmental change: population growth, climate change, desertification, water scarcity, food and urbanisation issues as well as natural disasters. Furthermore, it draws conceptual conclusions for a fourth phase of research on human and environmental security and peace as well as policy conclusions for cooperation and partnership in the Mediterranean in the 21st century.

THE ENVIRONMENT

A HISTORY OF THE IDEA

Johns Hopkins University Press The untold history of how people came to conceive, to manage, and to dispute environmental crisis, *The Environment* is essential reading for anyone who wants to help protect the environment from the numerous threats it faces today.

INDUSTRIAL IMPACT ON SOCIETY

OrangeBooks Publication It is my great pleasure to present this book entitled 'Industrial Impact on Society' provides a glimpse of many social deteriorating problems that have been affected the Kashmiri society since the dawn of Industrialisation. It is a well known fact that there are sufficient books on this topic, but we hope this book will be useful for the students to know the harmful impacts of industrialisation that has polluted our society in a number of ways. Hope this book will also inspire to social planners and policy makers to frame several policies and schemes to improve the social deteriorating problems in the valley. This book is prepared mainly to cater to the needs of the undergraduate and postgraduate students. The book also covers topics included in the syllabi of many national and state level competitive exams based on environmental sociology.

THE ENVIRONMENTAL CRISIS AND ART

THOUGHTLESSNESS, RESPONSIBILITY, AND IMAGINATION

Rowman & Littlefield The global challenge of climate change presents a daunting task that requires human thinking and ingenuity. In this context, stories, narratives, and images can provide incentives for the imagination, essential in grappling with the complex perplexities of abstract dimensions while also anchoring thinking in human spatial and temporal existence.

ART AND DESTRUCTION

Cambridge Scholars Publishing Most talk of and writing on art is about its relationship to creation and creativity. This of course takes various forms, but ultimately the creative act in the making of art works is a key issue. What happens when we put together art and destruction? This has been referenced in some major areas, such as that of art and iconoclasm and auto-destructive art movements. Less evident are accounts of more intimate, smaller scale 'destructive' interventions into the world of the made or exhibited art object,

or more singular and particularised approaches to the representation of mass destruction. This volume addresses these lacunae by bringing together some distinct and very different areas for enquiry which, nevertheless, share a theme of destruction and share an emphasis upon the history of twentieth and twenty-first century art making. Scholars and makers have come together to produce accounts of artists whose making is driven by the breaking of, or breaking down of, matter and medium as part of the creative materialisation of the idea, such as Richard Wentworth, Bouke de Vries, Cornelia Parker, to name some of those artists represented here, and, indeed in one case, how our very attempts to write about such practices are challenged by this making process. Other perspectives have engaged in critical study of various destructive interventions in galleries. Some of these, whether as actual staged actions in real time, or filmic representations of precarious objects, are understood as artistic acts in and of themselves. At the same time, an account included in this volume of certain contemporary iconoclasts, defacing or otherwise effecting destructive attempts upon canonised exhibited artworks, reflects upon these destructive interventionists as self-styled artists claiming to add to the significance of works via acts of destruction. Yet other chapters provide a fresh outlook upon distinctive and unusual approaches to the representation of destruction, in terms of the larger scale and landscape of artistic responses to mass destruction in times of war. This book will be of interest to readers keen to encounter the range of nuance, complexity and ambiguity applicable to the bringing together of art and destruction.

RIPPLING

HOW SOCIAL ENTREPRENEURS SPREAD INNOVATION THROUGHOUT THE WORLD

John Wiley & Sons Principles for driving significant change throughout an entire system Drawing on the knowledge and experience of working with hundreds the world's top social change leaders in all fields, Beverly Schwartz presents a model for change based on five proven principles that any individual leader or organization can apply to bring about deep, lasting and systematic change. Rippling shows how to activate the type of change that is needed to address the critical challenges that threaten to destroy the foundations of our society and planet in these increasingly turbulent times. These actionable principles are brought to life by compelling real-life stories. Schwartz provides a road map that allows anyone to become a changemaker. Presents some of today's most innovative and effective approaches to solving social and environmental challenges Offers a vision of social entrepreneurs as role models, catalysts, enablers and recruiters who spread waves system changing solutions throughout society The author offers a model of change that begins with the end result in mind First book from an insider at Ashoka, the foremost global organization on social change through social entrepreneurship Rippling clearly demonstrates how and when empathy, creativity, passion, and persistence are combined; significant, life-altering progress is indeed possible.

THIS IS ENVIRONMENTAL ETHICS: AN INTRODUCTION

John Wiley & Sons Provides students and scholars with a comprehensive introduction to the growing field of environmental philosophy and ethics Mitigating the effects of climate change will require global cooperation and lasting commitment. Of the many disciplines addressing the ecological crisis, philosophy is perhaps best suited to develop the conceptual foundations of a viable and sustainable environmental ethic. This is Environmental Ethics provides an expansive overview of the key theories underpinning contemporary discussions of our moral responsibilities to non-human nature and living creatures. Adopting a critical approach, author Wendy Lynne Lee closely examines major moral theories to discern which ethic provides the compass needed to navigate the social, political, and economic challenges of potentially catastrophic environmental transformation, not only, but especially the climate crisis. Lee argues that the ethic ultimately adopted must make the welfare of non-human animals and plant life a priority in our moral decision-making, recognizing that ecological conditions form the existential conditions of all life on the planet. Throughout the text, detailed yet accessible chapters demonstrate why philosophy is relevant and useful in the face of an uncertain environmental future. Questions which environmental theory might best address the environmental challenges of climate change and the potential for recurring pandemic Discusses how inequalities of race, sex, gender, economic status, geography, and species impact our understanding of environmental dilemmas Explores the role of moral principles in making decisions to resolve real-world dilemmas Incorporates extensive critiques of moral extensionist and ecocentric arguments Introduces cutting-edge work done by radical "deep green" writers, animal rights theorists, eco-phenomenologists, and ecofeminists This is Environmental Ethics is essential reading for undergraduate students in courses on philosophy, geography, environmental studies, feminist theory, ecology, human and animal rights, and social justice, as well as an excellent graduate-level introduction to the key theories and thinkers of environmental philosophy.

SELF CONTROL IN SOCIETY, MIND, AND BRAIN

Oxford University Press This book presents social, cognitive and neuroscientific approaches to the study of self-control, connecting recent work in cognitive and social psychology with recent advances in cognitive and social neuroscience. In bringing together multiple perspectives on self-control dilemmas from internationally renowned researchers in various allied disciplines, this is the first single-reference volume to illustrate the richness, depth, and breadth of the research in the new field of self control.

CURRENT POLICY

ANXIETY IN A 'RISK' SOCIETY

Routledge Few would dispute that we are living at a time of high anxiety and uncertainty in which many of us will experience a crisis of identity at some point or another. At the same time, news media provide us with a daily catalogue of disasters from around the globe to remind us that we inhabit a world of crisis, insecurity and hazard. Anxiety in a Risk Society : looks at the problem of contemporary anxiety from a sociological perspective highlights its significance for the ways we make sense of risk and uncertainty argues that the relationship between anxiety and risk hinges on the nature of anxiety. Iain Wilkinson believes that there is much for sociologists to learn from those who have made the condition of anxiety the focus of their life's work. By making anxiety the focus of sociological inquiry, a critical vantage point can be gained from which to attempt an answer to the question: Are we more anxious because we are more risk conscious? This is an original and thought-provoking contribution to the understanding of late modernity as a risk society.

ENVIRONMENTAL IMPACT OF THE PROPOSED TRANSMITTER SITE IN ISRAEL

HEARING BEFORE THE SUBCOMMITTEE ON INTERNATIONAL OPERATIONS OF THE COMMITTEE ON FOREIGN AFFAIRS, HOUSE OF REPRESENTATIVES, ONE HUNDRED FIRST CONGRESS, SECOND SESSION, FEBRUARY 20, 1990

SCIENCE AND SOCIETY IN THE FACE OF THE NEW SECURITY THREATS

IOS Press "This selection of papers explores the challenges faced by the science establishments in the new security environment across a range of NATO countries and examines possible solutions by looking in closer detail at some national case studies. It sets out the importance of the NATO Security Through Science programme in the new security environment. It discusses the new security threat in its historical context and looks at the differing perspectives of industry, academia and the military, to the current security environment. Other topics discussed: the situation in three different geographical locations former Soviet Union, Mediterranean Dialogue, Western European countries with the US; the issue of breaking down barriers among the scientific communities; between government and industry; amongst ministries, between international agencies and academics; between policy makers and industry. This publication also studies models that offered potential solutions or some guidance to other countries with similar issues, using case studies for the United Kingdom, Turkey and Scandinavia."

WORLD FORESTS, SOCIETY AND ENVIRONMENT

Springer Science & Business Media This book addresses current global and regional issues concerning the world's forests, societies and the environment from an independent and non-governmental point of view. A main message is that cooperation on a global scale is not only commendable, but essential if solutions to the problems facing the world's forests are to be found. To achieve this, modern science needs to find a clearer picture of relationships between forests, human activity and the environment and of the consequences of environmental change for the ability of societies to survive. Part I, Editorial Perspectives, is analyzing the ongoing globalization processes of forests, societies and the environment. Part II, Society and Environment, reviews worldwide trends with significance for the future of forests and forestry. While the trends are influenced by forest sector issues, that sector is influenced to a much larger extent by external factors - such as demography, urbanization, or technological development. Part III, Importance of Forests, looks at the value of the goods and services of forests; tangible and intangible; market and non-market; and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development. In Part IV, Global Forum, scientists take up global forestry

themes - deforestation, trade and the environment, climate change, biodiversity - with the aim of stimulating wider discussion. Part V, Regional Forum, looks at major themes of particular relevance to Africa, Asia-Pacific, Latin America, North America and Europe, such as farm and agroforestry, corruption and concessions, urban forestry and environmental conflicts. Part VI introduces the special theme - forest sectors in transition economies. Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy, illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted. In the past millennium the entire world has been discovered. In the past half century the contribution of forests to the economy worldwide has been perceived, while only recently have their societal and environmental benefits been globally recognized. Globalization is a demanding process requiring knowledge and information. This book offers knowledge, facts and information - but also values from diverse human and cultural perspectives - about world forests, society and environment to help us towards equity in our use of the global forest, to create a clearer vision on a unasyuva.

PHYSICS AND SOCIETY

ESSAYS IN HONOR OF VICTOR FREDERICK WEISSKOPF BY THE INTERNATIONAL COMMUNITY OF PHYSICISTS

Springer Science & Business Media "The essays in this book are by some of the world's leading physicists, including seven Nobel Prize winners. The essays address topics ranging from Weisskopf's contributions to theoretical physics to more intimate views of his role as a teacher, friend, and humanist."--BOOK JACKET.

POLITICAL VIEWS AND IDEAS

STUDIES IN MODERN POLITICS

Cambridge Scholars Publishing This book is a study of modern politics, from a Socialist and Left-wing perspective. As a collection of essays on political ideas, it presents an analysis of the crisis of our times, through examining the various crises and problems which define modern society. It considers individual political aspects of the contemporary problems of Capitalist politics, ranging from economic crisis to social crisis, from Imperialism to the environmental crisis. As such, it serves to outline a solid argument for a better politics today: the politics of Socialism and Democratic Socialism.

FASHIONOPOLIS

THE PRICE OF FAST FASHION - AND THE FUTURE OF CLOTHES

Head of Zeus Ltd An investigation into the damage wrought by the colossal clothing industry - and the grassroots, high tech, international movement fighting to reform it. What should I wear? It's one of the fundamental questions we ask ourselves every day. More than ever, we are told it should be something new. Today, the clothing industry churns out 80 billion garments a year and employs every sixth person on Earth. Historically, the apparel trade has exploited labour, the environment, and intellectual property - and in the last three decades, with the simultaneous unfurling of fast fashion, globalization, and the tech revolution, those abuses have multiplied exponentially - and primarily out of view. We are in dire need of an entirely new human-scale model. Bestselling journalist Dana Thomas has travelled the globe to discover the visionary designers and companies who are propelling the industry toward that more positive future by reclaiming traditional craft and launching cutting-edge sustainable technologies to produce better fashion. In Fashionopolis, Thomas sees renewal in a host of developments, including printing 3-D clothes, clean denim processing, smart manufacturing, hyperlocalism, fabric recycling - even lab-grown materials. From small-town makers and Silicon Valley whizzes to household names such as Stella McCartney, Levi's and Selfridges, Thomas highlights the companies big and small that are leading the crusade. We all have been casual about our clothes. It's time to get dressed with intention. Fashionopolis is the first comprehensive look at how to start.

OUR FINAL CENTURY

A SCIENTIST'S WARNING : HOW TERROR, ERROR, AND ENVIRONMENTAL DISASTER THREATEN HUMANKIND'S FUTURE IN THIS CENTURY - ON EARTH AND BEYOND

Heinemann Educational Books Our planet may be insignificant on a cosmic scale, but the evolution of intelligent life here makes it unusual, it is likely to be unique in our galaxy. Yet we may be on the verge of destroying it, of destroying ourselves - over the next century the future of life in the cosmos could be either jeopardised - or safeguarded for perpetuity. Exploring the threats of genetically engineered viruses, nanotechnology, and environmental catastrophe, Martin Rees demonstrates the risks we are taking, as well as the great difficulties of limiting them. Doomsday scenarios are familiar to us all, but rarely are they presented with such authority and knowledge as in this book.

SAVING HUMANITY

TRULY UNDERSTANDING AND RANKING OUR WORLD'S GREATEST THREATS

FriesenPress Our world faces threats on many fronts—terrorism, environmental and natural disasters, and pandemics, to name just a few. In light of these growing dangers, we must ask: Is the total annihilation of the human race inevitable, or can we be saved? With a breadth and depth of knowledge that serves as a foundation to his proposals, along with almost forty years of research, Saving Humanity addresses these questions and assures readers that hope for human survival and happiness still exists, but only if we unite under a common purpose. Chinese scholar and scientist Jiaqi Hu proposes that humanity won't be wiped out by war or nuclear weapons, famine, or climate change. Instead, the chief culprit raging against our survival is technology. If technology continues to grow and develop, human beings could vanish from the earth in less than two or three hundred years. Hu's solution to this problem will challenge and inspire readers as they realize that the future of humanity rests in our hands— now. Devoting all of his time to his mission of spreading this message of hope and urgency, Jiaqi Hu is reaching out to leaders and people of influence who can be the giants to lead the charge of saving humanity. Please read and share, spreading the word and raising up giants.

CIVIL SOCIETY IN THE AGE OF MONITORY DEMOCRACY

Berghahn Books Since the emergence of the dissident "parallel polis" in Eastern Europe, civil society has become a "new superpower," influencing democratic transformations, human rights, and international co-operation; co-designing economic trends, security and defense; reshaping the information society; and generating new ideas on the environment, health, and the "good life." This volume seeks to compare and reassess the role of civil society in the rich West, the poorer South, and the quickly expanding East in the context of the twenty-first century's challenges. It presents a novel perspective on civic movements testing John Keane's notion of "monitory democracy": an emerging order of public scrutiny and monitoring of power.
