1977 SUPPLEMENT**COLLEGE MUSIC CURRICULA FOR A NEW CENTURY**

Oxford University Press *College Music Curricula for a New Century* considers what a more inclusive and socially engaged curriculum of musical study might look like in universities. Its goal is to create dialogue about how to transition to new paradigms and how they might be implemented in practical terms, based on existing experiments taking place nationally and internationally.

Routledge *Economists in the post-Cold War era are increasingly circumspect about universal, one-size-fits-all conceptions of human behaviour and economic institutions. Contemporary economics is thus marked by a nascent pluralism. Economic Pluralism brings these pluralist sensibilities to the fore. Its twenty original essays explore the positive potential and critical limits of pluralism in economic theory, philosophy, institutions, and policies, and education. These twenty original essays reflect the maturity and breadth of pluralist scholarship in economics today. The first eight chapters (including critical essays by Tony Lawson, Diana Strassmann et al., Frederic Lee, and David Colander) stake out contentious positions on the value of pluralism in economic theory and philosophy. The remaining chapters explore the meaning and consequences of pluralism in economic education, institutions, and policies. This volume provides a unique "second generation" discussion of pluralism in economics. Its twenty original essays stake out contentious positions on pluralism in economic theory, philosophy, institutions, and policies, and education, reflecting multiple generations and traditions of thought. It is a volume certain to spur wider conversation about the scope and value of economic pluralism for the 21st century. This volume would be of most interest as a supplementary text for graduate or undergraduate courses that include units on heterodox economics or economic philosophy.*

QUANTUM ELECTRODYNAMICS

Springer Science & Business Media *Since the need for a third edition of this book has arisen, we have endeavoured to improve and extend it in several ways. At many places small changes were made, misprints have been corrected, and references have been added. In Chap. 5 new theoretical and experimental results on the Lamb shift in heavy atoms and on the anomalous magnetic moment of the muon are reported. We have also added a number of new topics in Chaps. 3, 5, and 7 in the form of examples and exercises. Example 3. 19 contains a detailed treatment of electron-positron pair production in the collision of a high-energy photon with a laser beam. This is supplemented by Exercise 3. 20 where a closed solution of the Dirac equation in the field of a plane wave is derived. Furthermore, Example 5. 4 on the running coupling constant in QED and Example 7. 6 on the supercritical point charge problem have been added. Finally, Example 7. 8 treats the birefringence of the QED vacuum in a strong magnetic field. We thank all colleagues and readers who have informed us about misprints in the book and are grateful to the team at Springer-Verlag for expertly handling the preparation of this new edition. Frankfurt am Main, Walter Greiner August 2002 Joachim Reinhardt Preface to the Second Edition The need for a second edition of our text on Quantum Electrodynamics has given us the opportunity to implement some corrections and amendments.*
